

**Assignment -4**  
Python Programming

Assignment Date	10 oct2022
Student Name	M.K.Sharvesh barath
Student Roll Number	910619106055
Maximum Marks	2 Marks

**Question-1:**

Write code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events. Upload document with wokwi share link and images of IBM cloud

## Output:

The screenshot shows the WOKWI web-based simulation environment. On the left, the sketch code is displayed, which includes the necessary libraries and configuration for an ESP32 to connect to the IBM Watson IoT Platform and use an ultrasonic sensor. The code defines the device type as 'TestDeviceType' and the device ID as '12345'. It also sets up the server, topic, and authentication details. The sensor is connected to the ESP32 via a breadboard, with the sensor's VCC connected to the ESP32's 5V pin, GND to GND, and the trigger and echo pins connected to the ESP32's digital pins.

```

```

The screenshot shows the IBM Watson IoT Platform dashboard. The device details for device ID 12345 are displayed, including its status (Disconnected), device type (Raspberrypi), and class ID (Device). The 'Recent Events' tab is selected, showing a list of distance measurements. The table below summarizes the data from the 'Recent Events' tab.

Event	Value	Format	Last Received
Distance	{"distance":74}	json	a few seconds ago
Distance	{"distance":89}	json	a few seconds ago
Distance	{"distance":12}	json	a few seconds ago
Distance	{"distance":52}	json	a few seconds ago
Distance	{"distance":45}	json	a few seconds ago
